- You can follow along with the video using this notebook: **Predicting house prices.ipynb**

- You will also need this dataset: **home_data.gl.zip**

- Save both of these files in the same directory (where you are calling iPython notebook from) and unzip the data file. **Not sure where to save the files? See this guide.**

- Open the notebook using IPython Notebook.

- Note that this is the same notebook used in the programming assignment for this module.

- Note that there is a bug in GraphLab Create 1.6.0, where the scatter plots don't show up in the notebook. Please upgrade to a new version, if you have 1.6.0.
